

Safety Tips May 2012

When fueling any engine, do not answer your cell phone. It seems there is enough energy to ignite the fumes (taken from an article from Shell Oil Company).

When using OCME or private equipment (e.g. engine, car) if you do not understand how to use it properly, please ask before you use it. An example is lifting a small engine or caboose, do not lift by the roof as this may damage the roof and other parts of the car.

When helping a member or guest, please ask the owner before helping. They may or may not need nor want your help.

Always use your safety glasses – you only get two eyes for life.
